Representative Import Fixture for Apple Pages

This document is intentionally ordinary: it is meant to be opened in Apple Pages and saved as a native .pages file for importer tests.

1. Body text and inline formatting

Purpose. Use this fixture to validate basic text extraction, paragraph ordering, character runs, and style preservation. It includes **bold**, *italic*, underlined, and code-like text: `let importer = PagesImporter()`.

Unicode coverage: café, naïve, coöperate, emojis 🚀✅, smart quotes “like this”, em dash —, non-breaking spaces, and CJK text: 日本語・中文・한국어.

2. Lists

- Plain paragraph before list should remain separate.
- First unordered item with a longer line that wraps naturally.
- Second unordered item with punctuation: a/b, 10–20%, $1,234.56.

1. First ordered item
2. Second ordered item
3. Third ordered item with nested-looking text: 1.1 not actually nested

3. Table

The table has a header row, mixed alignment, empty cells, currency-like text, and multiline text.

Feature	Expected import	Sample value	Notes
Paragraph	Text + style	Heading 1	Preserve reading order
Image	Binary asset	PNG 1000×520	Alt text may or may not survive conversion
Hyperlink	URL target	https://developer.apple.com	External link relationship
Empty cell			Importer should not crash

4. Link and image

External link: Apple Developer Documentation — useful for checking URL extraction.

Fixture coverage: headings, styles, lists, table, image, link, section break, unicode text

Fixture image: quarterly import volume

Landscape section

5. Landscape section and wider table

This page checks section handling, orientation, headers/footers, and wide tables after Pages conversion.

Column A	Column B	Column C	Column D	Column E	Column F
R1C1	R1C2	R1C3	R1C4	R1C5	R1C6
R2C1	R2C2	R2C3	R2C4	R2C5	R2C6
R3C1	R3C2	R3C3	R3C4	R3C5	R3C6

6. Dates and formula

This page checks dates and formula

Column A	Date	Column B	Column C	Column D
Item 1	6-18-26	12	0,35 USD	4,20 USD
Items 2	6-15-26	8	34,49 USD	275,92 USD
Total		**20**		**280,12 USD**

7. End marker

END_OF_PAGES_IMPORT_FIXTURE — use this marker to verify full-document extraction.
