

One authored document. Four dependable outputs.

AngleSharp parsing, bounded document layout, searchable vector output, and native form fields—without a browser process.

PDF · PNG · SVG

Same parsed source and policy

CASCADE

Layers + nesting

LAYOUT

Grid + subgrid

PAINT

CSS Color 4

OUTPUT

Real AcroForms

Render pipeline

One managed scene keeps output adapters thin.

Validated

01 / PARSE

HTML + CSS

AngleSharp, layers, nesting, media and container queries.

02 / LAYOUT

Document scene

Paged grid, subgrid, typography, counters, SVG and MathML.

03 / EXPORT

Portable output

Searchable PDF, vector SVG, PNG and native form fields.

Container-aware composition

This pair becomes two columns only when its own container has room, not merely when the page is wide.

Bounded by design

Resource limits, deterministic fallbacks, structured diagnostics, and no script execution are part of the rendering contract.

MATHML →

$$E = m c^2$$

Proof inside the PDF

These controls remain fillable.

- 01. **Stylesheet paint:** layered conic and linear gradients stay vector.
- 02. **Unicode text:** line breaking and fallback remain searchable.
- 03. **Page semantics:** named geometry and margin counters are resolved.

Donaudampfschiffahrtsgesellschafts-
kapitän demonstrates language-aware
hyphenation in a deliberately narrow
measure.
