Source A

This page is created first, then merged with Source B through the fluent PdfDocument API.

Capability	Status	Notes
Create	Ready	Dependency-free writer surface
Inspect	Ready	Metadata, pages, links, outlines, blockers
Extract	Ready	Page ranges and reordered pages

Source A - details

Page two is extracted later. This proves the example is not just visual; it also exercises read/rewrite operations.

Source B

A second input document is merged into the final pack, then a stamp is applied to the combined output.

- Merge reads source pages and rewrites a new document.
- Stamp adds a content stream to selected pages.
- Text extraction writes a sidecar text file for PowerShell-friendly workflows.

Operation	Output
MergeWith	Pdf.Showcase.Manipulation.Merged.pdf
Pages.Extract	Pdf.Showcase.Manipulation.ExtractedPage2.pdf
Stamp.Text	Pdf.Showcase.Manipulation.Stamped.pdf
Read.Text	Pdf.Showcase.Manipulation.ExtractedText.txt
