Configuration migration guide

Move an illustrative report job from separate output settings to a named delivery block.

Before you start, back up the configuration and use a temporary output folder for the first run.

Map the settings

Version 1	Version 2	Meaning
outputPath	delivery.folder	Destination for generated files
filePrefix	delivery.prefix	Prefix applied to each report
overwrite	delivery.conflict	Use replace or fail explicitly

Before

```json
{
  "outputPath": "./reports",
  "filePrefix": "weekly-",
  "overwrite": false
}
```

After

```json
{
  "delivery": {
    "folder": "./reports",
    "prefix": "weekly-",
    "conflict": "fail"
  }
}
```

Verify the migration

- Run once with a small known input.
- Compare filenames, row counts and totals with the previous job.
- Repeat the run to confirm the chosen conflict behavior.
- Keep the original configuration until the scheduled run succeeds.
