Document automation reading list

A compact PDF reference for a team starting a document-generation workflow.

Start with a runnable example

Open the OfficeIMO examples directory and choose a format close to your intended output. Keep the generated file alongside its input data.

Keep these references close

Resource	Use it for
Source repository	Browse code, examples and package READMEs.
Published releases	Read release notes and inspect release assets.
Issue tracker	Search known problems before filing a reproducible report.

When reporting a problem

- Include the smallest input that reproduces the issue.
- State the package version, target framework and operating system.
- Describe the expected result and attach a safe sample of the actual output.

The resource names are clickable annotations. A static image shows their labels; open the PDF to follow them.
