Row Columns

A compact visual gate for explicit fixed, content-sized, and relative columns with first-class gutters.

Status

The left column carries operational copy with comfortable wrapping, spacing, and no collision with the neighboring column.

- Gutters are first-class layout state.
- List markers stay inside the column frame.

Callout: column panels can hold emphasis without leaving the row flow.

Ready: row gutters are part of the composition model instead of caller-managed whitespace.

Owner

Operations

Next

The right column uses the same page flow but starts after an explicit gutter, giving report layouts a professional reading rhythm.

1. Compose column content.
2. Render each list item independently.
3. Compare the raster baseline.

Metric	Value
Sizing	Relative
Panels	Yes

Guarded: the Poppler baseline catches cramped columns and accidental gutter regressions.

End of row column sample.
